

# DFT Terrazzo

the prestigious industrial flooring

The requirements for modern industrial flooring are constantly growing. Beside high mechanical strength while having the lowest possible maintenance and cleaning costs, an appealing surface is also important. Our industrial flooring DFT Terrazzo meets all these criteria and, thanks to its characteristics, offers a splendid alternative to common industrial flooring.

## We add the finishing touch

The base of the DFT Terrazzo is a cement-bonded DFT industrial coating. By means of thorough surface processing the upgrading to DFT Terrazzo is achieved step by step with different sanding and polishing steps. Advantage: Beside the prestigious surface, DFT Terrazzo combines all the positive characteristics of our industrial coatings. On request individual colouring provided by adding colour pigments and/or special stone additives is possible.

## Functional and efficient for new construction and revitalisation

DFT Terrazzo is also suitable for revitalising old DFT floors. Even with strong surface soiling, after completing this process it can look like a new floor. Advantage: A revitalisation can be carried out even during running business, depending on the local conditions. The sanding process is carried out without chemicals.

## Surface protection

As a rule DFT Terrazzo receives a final special surface treatment offering not only the stain protection, but also high-quality shine and easy cleaning. It is suitable for food, permeable and offers a basic acid protection.

## Areas of application

DFT Terrazzo is perfectly suited for industrial areas frequented by the public like e.g. cash and carry markets, DIY superstores, exhibition halls as well as industrial buildings and other commercially used buildings and it is a real alternative to ceramic tile flooring and artificial stone flooring.

## Features:

- aesthetic surface
- efficient and sustainable
- low maintenance and cost-effective cleaning
- slip-resistant
- jointless
- high levelness
- low wear and low maintenance
- individual colour design possible
- can be driven on with little noise and vibration
- suitable for hovercrafts

## Would you like to receive more information?

Simply call us, send us a fax or an email. We will be pleased to give you individual advice based on your requirements.
