

Cleaning and Care of Latexfalt Industrial Floorings

Soiled floors are not an advertisement for a company. Even worse, they could also harbour risks for man and machine. Thus, in well-managed companies, attention is paid to diligent cleaning and care.

From the Initial Cleaning to the Maintenance Cleaning

In the field of industrial floor cleaning, one distinguishes between different cleaning processes. As a general principle, following the construction phase, it makes sense to perform an initial cleaning. Following this, a nurturing treatment is recommended, which significantly simplifies the subsequent maintenance cleaning. Here we support you with the products "Latanol-Grund", "Latanol-Fix Super" and "Buzil".

Initial Cleaning: Clean from the Start

Our cleaning concentrate "Latanol-Grund" has been developed especially for DFT industrial floorings. It reliably removes soiling that occurred during the construction phase and can also be used for the initial cleaning in food areas.

"Latanol Grund" is only suited for use by a specialist company. Should this be desired, we would be happy to perform the initial cleaning for you.

Nurturing Treatment: For Greater Colour-Intensity

As a foundation for the subsequent wet cleaning of the Latexfalt floorings, we recommend a nurturing treatment with "Buzil G 103" after the initial cleaning. This dispersion is particularly suited for dark floors, such as Latexfalt, because it has high coverage and particularly good spreading properties. The product is slip-resistant and hardwearing.

Should this be desired, we can perform the nurturing treatment for you after completion of the construction phase. You can also procure "Buzil G103" from us and perform the nurturing treatment yourself.

Maintenance Cleaning: With Powerful Cleaning Effect

With normal use, it is customary to perform a wet cleaning of industrial floorings from time to time. Depending on the circumstances, daily wet cleaning may be required in areas subject to strong usage. Here, too, we recommend our cleaning concentrate "Latanol-Fix Super", which is also suited for use in cleaning machines. The product is characterised by a significant cleaning effect, it contains no solvents and is not corrosive, contains no caustic chemicals and is also suited for food areas.

To place an order, please write to our postal address or contact us via fax at +49 421 4583 134 or per e-mail to info@dft-bremen.de. We deliver throughout Germany within 48 hours. The delivery ensues ex works; please request prices and conditions separately.
